

LibidoPro for Women™

Nutritional support for the female sexual and reproductive health, including healthy libido & sexual pleasure*

Primary Applications*

- Promotes healthy female sexual functioning
- Supports the body in its ability to reach orgasm
- Improves libido and energy levels
- Contains adaptogenic properties
- Acts as an effective cardiovascular tonic
- Supports thyroid functioning

What is LibidoPro for Women?

LibidoPro for Women has been specifically formulated to promote a healthy libido and orgasm in women. LibidoPro for Women contains a range of specially selected herbs identified as having aphrodisiac properties. They are known for their supportive function in maintaining healthy sexual arousal and tonic effect on the female reproductive system.*

Ingredients

DMG (NN Dimethylglycine)

A nutritional supplement and vitamin B15 precursor with a range of immunomodulatory and supportive functions. DMG supplies methyl groups for modification, building, and detoxifying many constituents in the body, and can therefore promote general physical and mental energy levels and well-being. DMG also has cardiovascular benefits, improves circulation and maintains healthy oxygen utilization in the body.*

Ashwaghanda (*Withania somnifera*)

The active constituents of this Ayurvedic herb include alkaloids and steroidal lactones that together are called withanolides (particularly withaferin A), with a wide range of applications, having adaptogenic, anti-oxidant and androgenic properties. In addition, Ashwaghanda has demonstrated benefits for CNS functioning.

Supplement Facts

Serving Size 2 Capsules
Servings Per Container 30

| Amount Per Serving | % DV |
|---|-------|
| Proprietary Formula | 800mg |
| Gentian (root), Ashwaghanda (root), Siberian Ginseng (root), Ginkgo biloba (leaves), Tribulus (fruit), Dilacia inopiflora (root/bark), Sarsapirilla (roots, rhizome), Saw Palmetto (berries), DMG | † |

Ingredients (continued)

Research findings have included increased circulating monoamine oxidase and GABA levels with decreased glutamic acid and 5-hydroxytryptophan levels following 12 weeks of Ashwagandha therapy. Studies have also suggested that this herb has positive benefits for thyroid functioning, with increased T4 serum concentrations.*

Siberian ginseng (*Eleutherococcus senticosus*)

Perhaps the most important constituents of Eleuthero are the ginsenosides, which have demonstrated cardiovascular and adrenal benefits. Research also suggests that Siberian ginseng can help to promote stamina and fitness. In addition, animal studies lend growing support for the use of ginseng in improving sexual functioning.*

Maidenhair Tree (*Ginkgo biloba*)

Clinical trials have demonstrated the benefits of Ginkgo in supporting all phases involved in sexual desire. An open study on 63 subjects found that the percentage of women responding to the benefits of Ginkgo biloba was higher than that of men, with relative success rates of 91%. Ginkgo biloba was reported to have a positive effect on all four phases of the sexual response cycle: desire, excitement (lubrication), orgasm, and resolution. Mechanism of action is thought to be the ability of Ginkgo to improve circulation as well as the norepinephrine receptor-induced effects on the brain.*

Puncture Vine (*Tribulus terrestris*)

Recommended in TCM to increase female fertility and to encourage a healthy libido in both men and women. According to research, Tribulus has a positive effect on various hormones, including testosterone, DHEA, and estrogen-- thereby supporting sexual function.*

Great Yellow Gentian (*Gentiana lutea*)

The anti-oxidant therapeutic properties of this herb are thought to be due to its rich glycoside content, which helps support the effectiveness of other herbs.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

Ingredients (continued)

Muirapuama (Liriosma ovata)

Traditionally used as an aphrodisiac, studies have confirmed the benefits of Liriosma for sexual functioning. Among the substances found in the herb are alkaloids, fatty acids, tannins, volatile oils, sterols, and resins.*

Sarsaparilla (Smilax ornata)

Contains steroidal saporins, which are thought to mimic the action of some human hormones. It has been traditionally used to increase libido and as a supportive tonic to the female reproductive system.*

Saw Palmetto (Sabal serrulata)

While much of the focus on Saw Palmetto has been on its effect on male prostate health and functioning, this medicinal herb also has been investigated for its effects on female libido and hormonal balance.*

For Optimum Results

Some women experience immediate improvement in sexual functioning and libido. Other patients will notice a gradual improvement over a 3-6 week period. LibidoPro for Women should be taken regularly for maximum results. Results may vary, due to a number of influential factors.
